1. Overview

The pivots module provides the means to create pivot tables of almost any data from Oceanfile.

Pivot tables are particular suited to generating comparative analysis with the data metric or metrics that would wish to view as a comparative displayed as columns across a table layout.

Pivot table templates are saved to a library that provides quick and easy access to load any existing pivot table design.

Data may be pre-filtered to select date ranges, particular vessels, inspections, chapters, inspectors, inspecting companies, officers and management.

The pivot view allows data to be further filtered directly within the pivot table view.

The pivot module also includes a chart view of the data displayed in the pivot table which is created automatically based on the pivot columns and aggregate cells that are selected.
